US-PAT-NO: 6868437
DOCUMENT-IDENTIFIER: US 6868437 B1
TITLE: System and method for interprocess communication of remote procedure call messages utilizing shared memory

Detailed Description Text - DETX (17):

In a preferred embodiment, RPC server 101 monitors the length of RPC messages to optimize the size of shared memory segments. RPC server 101 may calculate an average length of RPC messages over a predetermined time or for a predetermined number of messages. The averaging calculation may occur on a per segment basis. Alternatively, the averaging calculation may occur over all shared memory segments. RPC server 101 may reconfigure shared memory segments to ensure that a certain percentage of messages may be communicated through the respective shared memory segments without fragmentation. Alternatively, manual reconfiguration may occur utilizing the RPC messaging averages.
